Tour Report to be evaluated with Practical Paper III

#### Mark Distribution and Indirect Grading System

Mark system is followed instead of direct grading for each question. After external and internal evaluations marks are entered in the answer scripts. All other calculations, including grading, will be done by the university using the software. Indirect Grading System in 7 point scale is followed. Each course is evaluated by assigning marks with a letter grade (A<sup>+</sup>, A, B, C, D, E or F) to that course by the method of indirect grading.

#### Mark Distribution

Sl. No.	Course	Marks
1	English	600
2	Additional Language	400
3	Core course: Physics	1750

4	Complementary course I: Mathematics	400
5	Complementary course II: Chemistry/....	400
6	Open Course	50
	<b>Total Marks</b>	<b>3600</b>

### Seven point Indirect Grading System

<i>% of Marks</i>	<i>Grade</i>	<i>Interpretation</i>	<i>Grade Point Average</i>	<i>Range of Grade points</i>	<i>Class</i>
90 and above	A <sup>+</sup>	Outstanding	6	5.5 - 6	First Class with distinction
80 to below 90	A	Excellent	5	4.5 – 5.49	
70 to below 80	B	Very good	4	3.5 – 4.49	First Class
60 to below 70	C	Good	3	2.5 – 3.49	
50 to below 60	D	Satisfactory	2	1.5 – 2.49	Second Class
40 to below 50	E	Pass/Adequate	1	0.5 – 1.49	Pass
Below 40	F	Failure	0	0 – 0.49	Fail

**Core course structure**  
**Total Credits: 56 (Internal: 20%; External: 80%)**

## CORE COURSE THEORY: EVALUATION SCHEME

The evaluation scheme for each course contains two parts: *viz.*, internal evaluation and external evaluation. Maximum marks from each unit is prescribed in the syllabus.

### 1. INTERNAL EVALUATION

20% of the total marks in each course are for internal evaluation. The colleges shall send only the marks obtained for internal examination to the university.

**Table 1: Components of Evaluation**

<i>Sl. No.</i>	<i>Components</i>	<i>Marks</i>
1	Attendance	5
2	Test papers: I & II	5 + 5
3	Assignment	2
4	Seminar/ Viva	3
<i>Total Marks</i>		20

**Table 2: Percentage of Attendance and Eligible Marks**

<i>% of attendance</i>	<i>Marks</i>
Above 90%	5
85-89%	4
80-84%	3
76-79%	2
75%	1

**Table 3: Pattern of Test Papers**

<i>Duration</i>	<i>Pattern</i>	<i>Total number of questions</i>	<i>Number of questions to be answered</i>	<i>Marks for each question</i>	<i>Marks</i>
2Hours	One word	6	6	1	6
	Short answer	10	8	2	16
	Paragraph	5	3	6	18
	Essay	2	1	10	10
<i>Total Marks*</i>					50

\*90% and above = 5, 80 to below 90% = 4.5, 70 to below 80% = 4, 60 to below 70% = 3.5, 50 to below 60% = 3, 40 to below 50% = 2, 35 to below 40% = 1, below 35% = 0

## **2. EXTERNAL EVALUATION**

External evaluation carries 80% marks. University examinations will be conducted at the end of each semester.

**Table 1: Pattern of Question Paper**

<i>Duration</i>	<i>Pattern</i>	<i>Total number of questions</i>	<i>Number of questions to be answered</i>	<i>Marks for each question</i>	<i>Marks</i>
3 Hours	One word or one phrase or true or false	10	10	1	10
	Short answer(one or two Sentence)	7	7	2	14
	Paragraph/half page	7	5	4	20
	Problems	7	4	4	16
	Essay	4	2	10	20
<i>Total Marks</i>					80

## **CORE COURSE PROJECT: EVALUATION SCHEME**

Project evaluation will be conducted at the end of sixth semester.

### **Project:**

1. Project work should be done as an extension of topics in the syllabus.
2. Project can be experimental / theoretical or done in collaboration (association) with a recognised lab or organisation.
3. Project work may be done individually or as group of maximum of six students.
4. A supervisor has to guide a batch of maximum 24 students. For an additional batch another supervisor has to be appointed. However the existing work load should be maintained.

### **Guidelines for doing project**

The project work provides the opportunity to study a topic in depth that has been chosen or which has been suggested by a staff member. The students first carryout a literature survey Which will provide the background information necessary for the investigations during the research phase of the project.

The various steps in project works are the following:-

- a) Wide review of a topic.
- b) Investigation on an area of Physics in systematic way using appropriate techniques.
- c) Systematic recording of the work.
- d) Reporting the results with interpretation in written and oral forms.

### **Use of Log Book**

- During the Project the students should make regular and detailed entries in to a personal laboratory log book through the period of investigation.
- The log book will be a record of progress on project and will be useful in writing the final report. It contains experimental conditions and results, ideas, mathematical expressions, rough work and calculation, computer file names etc. All entries should be dated.
- The students are expected to have regular meeting with their supervisor to discuss progress on the project and the supervisor should regularly write brief comments with dated signature.

- **The log book and the written report must be submitted at the end of the project.**

**Table 1: Internal Evaluation**

<i>Sl. No</i>	<i>Criteria</i>	<i>Marks</i>
1	Punctuality & Log book	3
2	Skill in doing project work/data	3
3	Scheme Organisation of Project Report	4
4	Viva-Voce	5
<i>Total Marks</i>		15

**Table 2: External Evaluation**

**Individual presentation is compulsory and individual Log book should be submitted**

<i>Sl. No</i>	<i>Criteria</i>	<i>Marks</i>
1	Content and relevance of the project, Methodology, Reference, Bibliography	12
2	Project Presentation, Quality of analysis, statistical tools, findings, recommendations	18
3	Project Report (written copy) and Log Book	10
4	Viva-voce	20
<i>Total Marks</i>		60

## **STUDY TOUR**

**Minimum two days visit to National research Institutes, Laboratories and places of scientific importance. Study tour report** has to be submitted with photos and analysis along with Practical Paper III for evaluation

### **Distribution of marks EXTERNAL**

No	Items	External (20)
1	Hand written Report	10
2	Outcome/Analysis	6
3	Photos( five photos)	4
	<b>TOTAL</b>	<b>20</b>

	Essay	2	1	8	8
<i>Total Marks</i>					20

\*Marks: 80% and above = 2.5, 60 to below 80% = 2, 50 to below 60% = 1.5, 40 to below 50% = 1, 35 to below 40% = 0.5, below 35% = 0.

## **2. EXTERNAL EVALUATION**

External evaluation carries 80% marks. University examination will be conducted at the end of 5<sup>th</sup> semester.

**Table 1: Pattern of Question Paper**

<i>Duration</i>	<i>Pattern</i>	<i>Total number of questions</i>	<i>Number of questions to be answered</i>	<i>Marks for each question</i>	<i>Marks</i>
	One word/One Phrase/True or false	6	6	1	6
	Short answer- one or two sentence	5	5	2	10
	Paragraph-half page	6	4	4	16
	Essay- within two pages	3	1	8	8
<i>Total Marks</i>					40

**Semester-1**  
**Core Course –1 - 36 hours (Credit – 2)**  
**PH1 B01: METHODOLOGY OF SCIENCE AND PHYSICS**

**Part A: Methodology and Perspectives of Sciences (10Hours)**

**Unit I – Science and Science Studies**

Types of knowledge: Practical, Theoretical, and Scientific knowledge, Information.

What is Science; what is not science; laws of science. Basis for scientific laws and factual truths. Importance of revision of scientific theories and laws, Significance of Peer Review. Science as a human activity, scientific temper, empiricism, vocabulary of science, science disciplines. Revolution in science and Technology.( Basic ideas of corpuscular theory, wave theory, electromagnetic theory and quantum theory)

**Unit II – Methods and tools of science**

Hypothesis: Auxiliary hypothesis, Ad-hoc hypothesis.

Theories and laws in science. Observations, Evidences and proofs.

Posing a question; Formulation of hypothesis; Hypothetico-deductive model, Inductive model.

Significance of verification (Proving), Mathematical methods vs. scientific methods.

Corroboration and falsification (disproving),

3. Arthur Beiser, Concepts of modern Physics - Section 4.9

**PART C**

**Ordinary Differential Equations(4hrs) :** 1st order homogeneous differential equations  
ref-1

**Vector Analysis (4 hrs)** : – Vector Operations - Vector Algebra – Component form – How vector transform, Applications of vectors in Physics.

**Differential Calculus (8hrs)** : – The operator  $\nabla$ - Gradient, Divergence, Curl – Physical interpretation - Product rules of  $\nabla$ - Second derivatives.

Integral Calculus: – Line integral, surface integral and volume integral - Fundamental theorem of Gradients – Gauss’s Divergence Theorem (Statement only)– The fundamental theorem of curl – Stoke’s theorem(Statement only). Divergence less and curlless fields. Curvilinear co-ordinates: – Spherical polar coordinates – cylindrical coordinates(Basic ideas).

**Matrices (4hrs)** : –Matrices: – Basic ideas of matrices – addition, subtraction, scalar multiplication, Transpose of a matrix, conjugate of a matrix, diagonal matrix - Representation of vectors as column matrix – Determinants – Cramer’s rule – Eigen Values and Eigen Vectors – Hermitian Matrix, Unitary Matrix

**Ref-1**

## Semester -2

Core course –II - 36 hours (Credit – 2)

### PH2 B03: PROPERTIES OF MATTER, WAVES & ACOUSTICS

#### Unit-1: Properties of Matter 9 Hours

Elasticity: Basic ideas, Work Done per Unit Volume, Relations between elastic constants, Poisson’s Ratio, Limiting Values of Poisson’s Ratio, Twisting Couple on a Cylinder (or a Wire), Torsion pendulum, Determination of Rigidity Modulus, Bending of Beams, Bending Moment, Cantilever Loaded at Free End, Depression of a Beam Supported at the Ends and Loaded at the Centre (weight of the beam neglected), Determination of  $Y$  by Bending of a Beam, I form of Girders.

(Sections: 8.1 to 8.18, 8.22 to 8.23, 8.26 to 8.27, 8.29 to 8.30, 8.33 to 8.34  
Elements of Properties of Matter by D.S. Mathur)

#### Unit-2 Harmonic Oscillator 14 hours

Periodic Motion, Simple Harmonic Motion and Harmonic Oscillator, Energy of a Harmonic Oscillator, Examples of Harmonic Oscillator, Anharmonic Oscillator, Composition of Two Simple Harmonic Motions of Equal Periods in a Straight Line, Composition of Two Rectangular Simple Harmonic Motions of Equal Periods: Lissajous Figures, Damping Force, Damped Harmonic Oscillator, Examples of Damped Harmonic Oscillator, Power Dissipation, Quality Factor, Forced Harmonic Oscillator

**(Sections: 9.1 to 9.4, 9.7, 9.10 to 9.11, 10.1 to 10.4 to 10.6 of Mechanics by J.C Upadhyaya)**

**Unit-3 Waves 8 hours**

Wave Motion, General Equation of Wave Motion, Plane Progressive Harmonic Wave, Energy Density for a Plane Progressive Wave, Intensity of a Wave, Transverse Waves in Stretched Strings, Modes of Transverse Vibrations of Strings, Longitudinal Waves in Rods and Gases, Fourier's Theorem, Wave Velocity and Group Velocity

**(Sections:11.1 to 11.9 , 11.12 to 11.13 of Mechanics by J.C Upadhyaya)**

**Unit-4 Acoustics 5 hours**

Intensity of Sound- Decibel and Bel, Loudness of Sound  
Ultrasonics: Production of Ultrasonic Waves- Piezo Electric Crystal Method, Determination of Velocity of Ultrasonic Waves in a Liquid - Acoustic Grating , SONAR, Reverberation, Sabine's Formula (Derivation not required), Absorption Coefficient, Factors affecting the acoustics of building, Requirements for good acoustics.  
Application of sound Waves - Recording and reproduction of sound (Magnetic tape, Cine film, Compact disc), Temperaments and musical instruments

**Properties of Matter and Acoustics by R.Murugeshan&KiruthigaSivaprasath)**  
**A Text Book of sound by- L. P. Sharma, Saxena (S. Chand)**

**Semester-3**

**Core Course – III - 54 hours (Credit –4)**

**PH3 B03: MECHANICS**

**UNIT-1**

**1. Frames of reference 8 hours Max marks 20**

Laws of Mechanics, Inertial frames of reference, Galilean transformation equations,

Hypothesis of Galilean invariance, Conservation of Momentum, Non inertial frames and fictitious forces, Rotating frames of reference, Centrifugal force and Coriolis force, Foucault's pendulum (Section 2.1 to 2.11 of Mechanics by J C Upadhyaya)

**2. Conservation of Energy 6 hours Max marks 15**

Conservation laws, Conservative forces, Conservation of energy for a particle: Energy function, Potential energy curve, Non conservative forces  
(Section 5.1 to 5.7, 5.10, 5.11 of Mechanics by J C Upadhyaya)

**3. Linear and Angular Momentum 9 hours Max marks 22**

Conservation of linear momentum, Centre of mass, Centre of mass frame of reference, Collision of two particles, Deflection of a moving particle by a particle at rest, Rockets,

Angular momentum and torque, Motion under central force, Areal velocity, Conservation

of angular momentum with examples

(Section 6.1 to 6.4 ,6.6 to 6.9 of Mechanics by J C Upadhyaya)

#### **4. Potentials and Fields**

**9 hours Max marks 22**

Central force, Inverse square law force, Potential energy of a system of masses, Gravitational field and potential, Escape velocity, Kepler's laws, Newton's deductions from Kepler's laws

(Section 7.1 to 7.4, 7.6to7.9, 7.18, 7.19 of Mechanics by J C Upadhyaya)

### **UNIT-2**

#### **5 Lagrangian formulations of Classical Mechanics 9 hours Max marks 20**

Constraints, Generalized co-ordinates, Principle of virtual work, D'Alembert's principle, Lagrange's equations, Kinetic energy in generalized co-ordinates, Generalized momentum, Cyclic co-ordinates, Conservation laws and symmetry properties- Hamiltonian of a system Classical Mechanics by Takwale and Puranik( 8:1-7)

### **UNIT-3**

#### **6. Special Theory of Relativity**

**13 hours Max marks 27**

1. Electromagnetism and Galilean transformation, Michelson Morley experiment, Ether hypothesis, Postulates of Special Theory of Relativity, Lorentz transformation equations, Velocity transformation, Length contraction, Time dilation, Simultaneity, Mass in relativity, Mass and energy ,Space time diagram, Geometrical interpretation of Lorentz transformation, Principle of covariance, Four-vectors in Mechanics
2. Classical Mechanics by Takwale and Puranik(14:1-9)

#### **Text books for study**

1. Mechanics by J C Upadhyaya 2003 edition
2. Classical Mechanics by Takwale and Puranik
3. Classical Mechanics by Hans and Puri
4. Classical Mechanics by J C Upadhyaya

#### **References**

1. Mechanics by D.S.Mathur
2. Classical Mechanics by Goldstein
3. Berkeley Physics course Vol 1

4. Feynman Lectures on Physics Vol 1
5. Elements of Mechanics – K Rama Reddy, S Raghavan & D V N Sarma- Universities Press
6. Introduction to Mechanics – Mahendra K Verma – Universities Press
7. Classical Mechanics-Aruldas

#### Semester-4

#### Core Course – IV 54 hours (Credit – 4)

#### PH4 B04: ELECTRODYNAMICS – I

#### UNIT I

#### 1. Electrostatics 20 hours      Max marks 37

Electrostatic field – Coulomb's law, Electric field, Continuous charge distributions - Divergence and curl of electrostatic field, Field lines and Gauss law, The divergence of  $\mathbf{E}$ , Applications of Gauss law, Curl of  $\mathbf{E}$  - Electric potential – Comments on potential, Poisson's equation and Laplace's equation, The potential of a localized charge distribution,

Electrostatic boundary conditions – Work and energy in electrostatics, The work done in moving a charge, The energy of point charge distribution, The Energy of a continuous charge distribution, Comments on Electrostatic energy – Conductors, Basic properties of conductors, Induced charges, The Surface charge on a conductor, The force on surface charge, Capacitors.

(Sections 2.1 to 2.5 of Introduction to Electrodynamics by David J Griffiths)

#### 2. Special Techniques for Calculating Potentials 6 hours      Max marks 15

Laplace's equation in One Dimension, Two Dimensions and Three Dimensions,

Uniqueness theorems - Method of images, The classic image problem, induced surface charge, force and energy. (Sections 3.1 to 3.2.3 of Introduction to Electrodynamics by David J Griffiths)

#### UNIT II

#### 3. Electric fields in matter 8 hours Max marks 22

Polarization – Dielectrics, Induced dipoles, Alignment of polar molecules, Polarization – The field of a polarized object, Bound charges, Physical interpretation of bound charges, The field inside a dielectric – The electric displacement – Gauss's law in presence of dielectrics, Boundary conditions for  $\mathbf{D}$  – Linear dielectrics, Susceptibility, Permittivity, Dielectric constant, Energy in dielectric systems, Forces on dielectrics, Polarizability and susceptibility.

(Sections 4.1 to 4.4.1, 4.4.3, 4.4.4 of Introduction to Electrodynamics by David J Griffiths)

### UNIT III

#### 4 .Magnetostatics

12 hours

Max marks 32

The Lorentz force law – Magnetic fields, Magnetic forces, cyclotron motion, cycloid motion, Currents, Linear, Surface and Volume current density – Biot -Savart law, The magnetic field of steady current – Divergence and curl of  $\mathbf{B}$ , Straight line currents, Applications of Ampere's law, Magnetic field of a toroidal coil, Comparison of magnetostatics and electrostatics – Magnetic vector potential, Vector potential, Magnetostatic boundary conditions.

(Sections 5.1 to 5.4.2 of Introduction to Electrodynamics by David J Griffiths)

#### 5. Magnetostatic fields in matter

8 hours

Max 20 marks

Magnetisation – Diamagnets, Paramagnets and Ferromagnets, Torques and forces on magnetic dipoles, Effect of a magnetic field on atomic orbits, Magnetization – Field of a magnetised object, Bound Currents, Physical interpretation, Magnetic field inside matter – Auxiliary field  $\mathbf{H}$ , Ampere's law in magnetised materials, Boundary conditions – Linear and nonlinear media, Magnetic susceptibility and permeability, Ferromagnetism. (Sections 6.1 to 6.4 of Introduction to Electrodynamics by David J Griffiths)

#### Textbook for study

Introduction to Electrodynamics by David J Griffiths, 3<sup>rd</sup> Ed.

#### References

1. Electricity and magnetism by Arthur F Kip
2. Physics Vol. II by Resnick and Halliday
3. Electricity and Magnetism- Berkley series
4. Electricity and Magnetism-Hugh D Young and Roger A Freedman

### Semester-5

Core Course – V 54 hrs (Credit – 3)

#### PH5 B06: ELECTRODYNAMICS-II

#### UNIT I (27 hours)

##### 1. Electrodynamics

15 hours

Max marks 32

Electromagnetic induction - Faraday's law, induced electric field, inductance, energy in magnetic fields – Maxwell's equations, Electrodynamics before Maxwell, Maxwell's

modification of Ampere's law, Maxwell's equations and magnetic charges, Maxwell's equations inside matter, Boundary conditions.

(Sections 7.2 to 7.3 of Introduction to Electrodynamics by David J Griffiths)

## **2. Electromagnetic waves**

**12 hours**

**Max marks 27**

Waves in one dimension, The wave equation, sinusoidal waves, boundary conditions : reflection and transmission, Polarization – Electromagnetic waves in vacuum , Wave equation for **E** and **B**, monochromatic plane waves in vacuum, energy and momentum of E.M. waves, Poynting vector - Electromagnetic waves in matter, Propagation through linear media, reflection and transmission at normal incidence.

(Sections 9.1 to 9.3.2 of Introduction to Electrodynamics by David J Griffiths)

## **UNIT II (27 hours)**

### **3. Transient currents**

**7 hours Max marks 20**

Growth and decay of current in LR and CR circuits – measurement of high resistance by leakage – growth of charge and discharge of a capacitor through LCR circuit – theory of BG – experiment to determine charge sensitiveness of BG using a standard condenser and HMS.

(Sections 12.1 to 12.6, 10.10 to 10.13 and section 11.14 of Electricity and magnetism by R. Murugesan)

### **4. AC circuits**

**12 hours Max marks 27**

AC through L, C, R, LC, CR, LR and LCR – resonance and resonant circuits – repulsion between coil and conductor – j operators, application to AC circuits – AC bridges – Anderson and Rayleigh bridge.

(Sections 22.1, 22.2, 22.3, 22.6, 22.7, 22.10, 22.11, 22.13, 22.18 to 22.22.1, 22.23 of Electricity and Magnetism by D.N. Vasudeva and sections 11.5 to 11.6 of Electricity and Magnetism by R. Murugesan)

### **5. Network theorems 8 hours Max marks 20**

Kirchhoff's laws, Voltage sign and current direction, Solution of simultaneous equations using determinants, Source conversion, Superposition theorem, Ideal equivalent circuits, Thevenin's theorem, Thevenizing a given circuit, Norton's theorem, Maximum power transfer theorem.

(Sections 2.2, 2.3, 2.4, 2.5, 2.6, 2.14, 2.15, 2.16, 2.17, 2.18, 2.19 and 2.30 from Electrical technology by Theraja)

## **Textbooks for study**

1. Introduction to Electrodynamics by David J Griffiths, 3<sup>rd</sup> ed.

2. Electricity and Magnetism by R.Murugeshan (Third revised edition)
3. Electrical technology by Theraja

### References

1. Electricity and magnetism by Arthur F Kip
2. Physics Vol. II by Resnick and Halliday
3. Electricity and Magnetism by D.N Vasudeva (Twelfth revised edition)
4. Introductory AC Circuit theory – K Mann & G J Russell- Universities Press

### Semester-5

#### Core Course – VI 54 hrs (Credit – 3)

#### PH5 B07: QUANTUM MECHANICS

### UNIT 1 (24 hrs)

#### 1. Particle Properties of Waves 8 hours      Max marks 20

Electromagnetic waves, black body radiation, ultraviolet catastrophe, Photoelectric effect, nature of light, wave particle duality, Compton Effect & its demonstration. Pair production, photons & gravity. (Sections 2.1 to 2.4 & 2.7 to 2.9 of Modern Physics- Arthur Beiser)

#### 2. Wave Properties Of Particles 10 hours      Max marks 22

De Broglie waves, waves of probability, phase velocity & group velocity, particle diffraction, Davisson And Germer experiment, Electron Microscope, Uncertainty principle I, Uncertainty principle II, Applying the uncertainty principle, Energy & time uncertainty.

(Sections 3.1 to 3.5 & 3.7 to 3.9 of Modern Physics by Arthur Beiser)

#### 3. Atomic Structure 6 hours      Max marks 15

The Bohr atom-energy levels and spectra, correspondence principle, nuclear motion, atomic excitation, Frank-Hertz experiment

(Sections 4.4 to 4.8 of Modern Physics by Arthur Beiser)

### UNIT 2 (30 hrs)

#### 4. Wave Mechanics 16 hours      Max marks 37

Classical mechanics is an approximation of quantum mechanics, wave function, Schrodinger equation-time dependant form, linearity & super position, expectation values, operators, Schrodinger equation-steady state form, eigen values & eigen functions, postulates of quantum mechanics, particle in a box, finite potential well,

tunnel effect-scanning tunneling microscope, harmonic oscillator wave function, energy levels, zero point energy.

(Sections 5.1, 5.3 to 5.11 & appendix to chapter 5 of Modern Physics by Arthur Beiser and Section 3.5 of Quantum Mechanics by G Arunldhas]

## **5. Hydrogen Atom**

**14 hours**

**Max marks 32**

Schrodinger equation for the hydrogen atom, separation of variables, quantum numbers, principal quantum number, orbital quantum number, magnetic quantum number, electron probability density, radiative transitions, selection rules, Zeeman effect, electron spin, exclusion principle, Stern-Gerlach experiment.

(Sections 6.1 to 6.10 & 7.1, 7.2 of Modern Physics by Beiser]

### **Textbooks for study**

Concepts of Modern Physics 6th Edition-By Arthur Beiser

### **References**

1. Modern Physics(II Edn.)-Kenneth Krane
2. Quantum Physics Of Atom, Molecules, Solids, Nuclei & Particles By R.Eisberg& R. Resnick (John Wiley)
3. Quantum Mechanics By G. Aruldas
4. Berkeley Physics Course: Quantum Physics By Wichmann
5. University Physics – Zemansky
6. Quantum Mechanics – TrilochanPradhan – Universities Press
7. Advanced Physics Second Edition – Keith Gibbs – Cambridge University Press
8. Introduction to Vector spaces in Physics - K A I L WijewardenaGamalath – Foundation Books
9. Quatum Mechanics –IswarsinghThyagi
10. Feynman Lectures

## **Semester-5**

**Core Course – VII - 54 Hours (Credit – 3)**

### **PH5 B08 PHYSICAL OPTICS AND MODERN OPTICS**

**UNIT I (5 hours)**

**Max marks 15**

**1.Fermat's Principle, verification of laws of reflection and refraction. 2 hours**

(Sections 2.1-2.6 (Brijlal, Subramaniam, &Avadhanulu Section 2.1-2.2 AjoyGhatak)

**Matrix methods**

**3 hours**

Refraction and translation, translation matrix, refraction matrix, system matrix, position of the image plane, magnification, system matrix for thick lens, system matrix for thin

Principles of holography, Theory of construction and reconstruction, of Hologram, Applications of Holography.(Sections 23.1-23.6 Brijlal, Subramaniyam, &Avadhanulu, Sections 18.1-18.4.AjoyGhatak)

## **UNIT VI**

**8 hours**

**Max marks 15**

### **8. Fiber Optics**

Optical fibre, Numerical aperture, step index fiber, pulse dispersion, graded index fibre, fiber optic communication system, fiber optic sensors. (Sections 24.1-24.3,24.5,24.6-24.7,24.11 AjoyGhatak, corresponding sections from Brijlal, Subramaniyam, &Avadhanulu)

### **References**

1. Optics by AjoyGhatak
2. Optics by Subramaniam, Brijlal&Avadhanulu – New edition
3. Optics by Mathur
4. Nonlinear Optics- B.B.Laud
5. Laser Fundamentals- Silfast
6. Wave Optics and its Applications – Rajpal S Sirohi – Orient Longman
7. Optical Communications – M MukundaRao – Universities Press
8. 8 Optics – Hetch and A RGanesan

## **Semester-5**

**Core Course –IX 72 hours (Credit – 4)**

### **PH5 B09: ELECTRONICS (ANALOG & DIGITAL)**

## **UNIT I**

### **1. Semiconductor rectifiers and DC Power supplies**

**8 hours. Max marks 15**

Preliminaries of rectification, Bridge rectifier, Efficiency, Nature of rectified output, Ripple factor, different types of filter circuits, voltage multipliers, Zener diode voltage stabilization (sections 6.13-6.15, 6.17 - 6.27 V.K Mehta)

### **2. Transistors:**

**14 hours Max marks 27**

Different transistor amplifier configurations:- C-B, C-E, C-C, their characteristics, amplification factors, their relationships, Load line Analysis, Expressions for voltage gain, current gain and power gain of C.E amplifier, cut-off and saturation points, Transistor biasing, Different types of biasing - Base resistor, voltage divider bias method, single stage transistor amplifier circuit, load line analysis, DC and AC equivalent circuits. (Section 8.7 - 8.10, 8.12-8.22, 9.2-9.8, 9.11-9.12, 10.4-10.5, 10.7-10.9 V K Mehta)

### **3. Multistage Transistor amplifier**

**4 hours Max marks 10**

R.C coupled amplifier- frequency response, and gain in decibels, Transformer coupled Amplifiers, Direct Coupled Amplifier, Comparison.

(Section 11.1-11.8, VK Mehta)

### **4. Feedback Circuits and Oscillators**

**8 hours Max marks 12**

Basic principles of feedback, negative feedback and its advantages, positive feedback circuits Oscillatory Circuits-LC, RC oscillators, tuned collector oscillator, Hartley,

Colpitt's, phase shift and crystal oscillators - their expressions for

frequency. Sections (13.1-13.5, 14.1 - 14.13, 14.15-14.20 VK Mehta)

## **UNIT II**

### **5. Digital Communication**

**5 hours Max marks 12**

Transmission and reception of radio waves, types of modulation, AM, FM their comparison advantages, demodulation, pulse code modulation (qualitative idea only)

(Sections: 16.1-16.10, 16.11-16.18, 16.22 VK Mehta)

### **6. Special Devices and Opamp**

**12 hours Max marks 18**

LED, basic idea of UJT, FET, MOSFET, OP-amp-basic operation,

application, inverting, Non-inverting, summing amplifiers, Differentiator integrator.

(Sections 7.2-7.4, 19.2-19.14, 19.14, 19.27-19.30, 21.11-21.14, 25.1, 25.16, 25.15-25.17, 25.23-25.26, 25.32, 25.34-25.35, 25.37 VK Mehta)

### **7. Number system**

**8 hours**

**Max marks 12**

Positional number system, binary number system, Binary - Decimal conversions, Representation of positive integer, negative number representation, Floating point Binary arithmetic, Compliments and its algebra. (Aditya P Mathur - 2.2 to 2.8).

### **8. Logic gates and circuits**

**13hrs.**

**Max marks 20**

Fundamental gates, Universal gates, De Morgan's theorem, Exclusive OR gate, Boolean relations, Karnaugh Map, Half adder, Full adder, RS Flip Flop, JK Flip flop

(Sections Malvino - 2.2 to 2.4, 3.1 to 3.5, 5.1 to 5.6, 6.3, 6.4, 7.1, 7.3, 7.5, 7.6, 8.2)

### **Text books for study**

1. Principles of electronics - VK Mehta - 2008 edition (S. Chand)
2. Introduction to Micro Procesors - Aditya P Mathur (Tata McGarw Hill)
3. Digital principles and applications - Leach and Malvino (Tata McGraw Hill)

### **References**

1. Digital Computer Fundamentals (Thomas.C. Bartee)
2. Electronics principles - Malvino
3. Physics of Semiconductor Devices- Second Edition – Dilip K Roy – Universities Press
4. Digital Fundamentals –Thomas L Floyd
5. Digital Technology-Principles and Practice-Virendrakumar
6. The Art of Electronics-Paul Herowitz& Winfield Hill
7. Electronic Principles and applications-A B Bhattacharya
8. Electronics-Classical and Modern-KAR

### **Semester 5**

### **OPEN COURSE –I**

**(For students from other streams)**

#### **Objective**

To develop scientific temper and attitude in students from other streams.

#### **Scope of the course**

Since the course does not require a solid base in physics only qualitative & elementary ideas of the subject are expected from the students.

### **PH5 D01 (3): ELEMENTARY MEDICAL PHYSICS (36 HOURS)**

#### **UNIT-1-NUCLEAR MEDICINE PHYSICS (12 Hours) Max mark 24**

Nuclear physics –Introduction to Radioactivity-Artificial and natural-Physical features of

radiation, conventional sources of radiation, Interaction of different types of radiation with matter— Ionizing & Non ionizing Radiations- excitation, ionization, and radioactive losses- Neutron interactions, Rayleigh scattering- Compton scattering - photoelectric effect - Pair production (Qualitative Study only), Radiation quantity and quality-Radiation exposure, Units of radiation dose, Measurement of radiation dose, safety, risk, and radiation protection—Radiopharmaceuticals – Radioactive agents for clinical studies— Biological effects & Genetic effect of radiation.

#### **Books for study**

1. W.R.Hendee&E.R.Ritenour, Medical Imaging Physics (4th edn) Wiley New York,
2. Khandpur R.S, “Handbook of Biomedical Instrumentation”, Tata McGraw-Hill,New Delhi, 1997.)

#### **UNIT – 2. MEDICAL INSTRUMENTATION- (12 Hours) Max mark 22**

Measurements of Non electrical parameters: Respiration-heart rate-temperature-blood pressure –Electrocardiography(ECG):Function of the heart-Electrical behaviour of cardiac cells-Normal and Abnormal cardiac rhythms-Arrhythmias, Electroencephalography(EEG): Function of the brain-Bioelectric potential from the brain-Clinical EEG-Sleep patterns-The abnormal EEG, Electromyography(EMG): Muscular servomechanism-Potentials generated during muscle actions

#### **Books for study**

1. John G. Webster, “Medical Instrumentation Application and Design”, John Wiley and sons, New York, 1998.,
2. Khandpur R.S, “Handbook of Biomedical Instrumentation”, Tata McGraw-Hill,New Delhi, 1997.)

### **UNIT-3-MEDICAL IMAGING TECHNIQUES (12 Hours) Max mark 22**

X-ray imaging-properties of X -rays- Production of X-rays--Planar X-ray imaging instrumentation-X-ray fluoroscopy. Ultrasound imaging- generation and detection of ultrasound – Properties – reflection -transmission – attenuation –Ultrasound instrumentation- Principles of A mode, B-mode-M-mode Scanning, Hazards and safety of ultrasound.

#### **Books for study**

1. John G. Webster, “Medical Instrumentation Application and Design”, John Wiley and sons, New York, 1998.,
2. Khandpur R.S, “Handbook of Biomedical Instrumentation”, Tata McGraw-Hill,New Delhi, 1997.)

#### Reference books:

7. Hendee&E.R.Ritenour, Medical Physics.

## **Semester-6**

**Core Course –X - 72 hrs (Credit – 4)**

### **PH6 B10: THERMAL AND STATISTICAL PHYSICS**

#### **Unit- I**

##### **Module 1..**

**18 hours**

**Max marks 32**

Thermodynamic system- Thermal equilibrium-zeroth law-concept of heat and temperature-thermodynamic equilibrium- quasistatic process -extensive and intensive variables- thermodynamic process (cyclic and non cyclic)-indicator diagram- workdone in isothermal, adiabatic, isobaric and isochoric –cyclic processes- concept of path and point functions-internal energy- first law of thermodynamics-relation between P,T,V,in adiabatic process-slope of adiabatic and isothermal process -application of first law to

heat capacities-(relation between  $C_p$  and  $C_v$ ) and latent heat- adiabatic and isothermal elasticity of a gas)

**Module 2.**

**11 Hours**

**Max marks 20**

Reversible and irreversible processes , Conditions for reversibility-second law of thermodynamics-heat engine, Carnot engine, derivation for expression for efficiency, efficiency, Carnot's refrigerator-thermodynamical scale of temperature- Carnot's theorem and its proof.- application of second law(Clausius-Clapyron equation)- internal combustion engine-otto engine ,diesel engine -its efficiencies

**Module 3.**

**14 hours**

**Max marks 22**

Entropy and adiabatics- definition of entropy-Change of entropy in a Carnot cycle-Change of entropy in an reversible cycle (Claussius theorem) -Change of entropy in an irreversible cycle (Claussius inequality)- Change in entropy of a perfect gas during a process-Change in entropy in a irreversible process-change in entropy due to free expansion-Change in entropy due to spontaneous cooling by conduction, radiation....etc, - Principle of increase of entropy-Entropy and available energy-Entropy and disorder-Nernst heat theorem-entropy temperature diagrams

(Relevant topics from Chapters 8 & 9 – Heat and Thermodynamics by D S Mathur- Revised fifth edition)

**Module 4.**

**10 hours**

**Max marks 15**

Thermodynamic functions-Enthalpy, Helmholtz function, Gibbs function-Maxwell's thermodynamic relations-TdS relations-application of Maxwell's thermodynamical relations-1.variation of intrinsic energy with volume-2.Joule-Kelvin coefficient-3.Claussius-Clapeyron equation from Maxwell's thermodynamic relations- changes of phase. (Relevant topics from Ch. 10-Heat and Thermodynamics by D S Mathur- Revised fifth edition)

**UNIT II**

**Module 5.**

**8 hours**

**Max marks 15**

Statistical distributions-Maxwell-Boltzmann statistics (no derivation)-Distribution of molecular energies in an ideal gas-Average molecular energy- Equi partition theorem-Maxwell-Boltzmann speed distribution law-Expressions for rms speed, most probable speed and mean speed. (Chapter 9.1, 9.2 and 9.3-Concepts of Modern Physics-Arthur Beiser)

**Module 6.****11 hours****Max marks 22**

Bose Einstein and Fermi Dirac distribution laws (no derivations)- Application of BE distribution law to black body radiation-Planck's radiation law-Stefan's law-Wien's displacement law-Fermi energy-Expression for Fermi energy of electron system-electron energy distribution- average electron energy at absolute zero-Degeneracy pressure and its astrophysical significance. (Relevant topics from Chapter 9, Concepts of Modern Physics

– Arthur Beiser)

**References:**

Heat and Thermodynamics-DS Mathur (V Edn.)

2. Physics- Resnick and Halliday
3. Heat and Thermodynamics-Zemansky
4. Thermodynamics – Y V C Rao – Universities Press
5. Advanced Physics Second Edition – Keith Gibbs – Cambridge University Press
6. Thermodynamics and statistical mechanics-Brijlal Subramaniam
7. Heat and Thermodynamics- A Manna

**Semester-6****Core Course – XI 72 hrs (Credit – 4)****PH6 B11 : SOLID STATE PHYSICS, SPECTROSCOPY AND LASER****PHYSICS UNIT –1 SOLID STATE PHYSICS****1. Crystal Physics****15 hours****Max marks 27**

Lattice Point & Space Lattice-Basis and crystal structure, unit cells and lattice Parameters, Unit cells v/s primitive cells, Crystal systems, crystal symmetry. The 23 symmetry elements in a cubical crystal, rotation axis and inversion. Symmetry elements, Bravais space lattices-metallic crystal structure, sodium chloride, diamond, zinc sulphide, hexagonal and closed packed structure, directions, planes and Miller indices. (Section 4.1 to 4.8, 4.11 to 4.15 and 4.18 - Solid State Physics by S.O. Pillai)

**2. X-ray Diffraction:****5 hours****Max marks 10**

Bragg's law – Bragg's X-ray spectrometer-Rotating Crystal method  
Section 5.7 to 5.11- Solid State Physics by S.O. Pillai

**3. Super conductivity:****8 hours****Max marks 12**

A survey of superconductivity-Mechanism of Superconductors-Effects of Magnetic Field-Meissner Effect-isotope Effect-Energy Gap -Coherence Length- Josephson effect-BCS Theory (Qualitative idea only) -Application of Superconductivity, Type I and Type II superconductors. (Section 8.1 to 8.5 & 8.10 of Solid State Physics - S.O. Pillai)

## UNIT-2 MOLECULAR SPECTROSCOPY

### 4 . Basic Elements of Spectroscopy 5 hours Max marks 10

Quantum of Energy-Regions of Spectrum-Representation of Spectrum-Basic Elements of Practical Spectroscopy-Signal to Noise Ratio-Resolving Power-Width & Intensity of Spectral Transitions (Section 1.2 to 1.8 of Fundamentals of Molecular Spectroscopy by Banwell& Elaine Mcash)

### 5. Microwave Spectroscopy 8 hours Max marks 15

Classification of Molecules-Interaction of Radiation with Rotating Molecules-Rotational Spectrum of Rigid Diatomic Molecule-Example of CO-Selection Rule-Intensity-Spectrum of non –rigid Rotator-Example of HF- Spectrum of symmetric Top molecule-Example of Methyl chloride-Enformation derived from Rotational Spectrum. (Section 6-Rotation of Molecules, Section 6.1 to 6.6, 6.9, 6.13, 6.14 of Molecular Structure & Spectroscopy by G Aruldas& Chapter 2 - Fundamentals of Molecular Spectroscopy by Banwell& Elaine M Mccash)

### 6. Infra Red Spectroscopy: 9 hours Max marks 15

Vibrational Energy of an Anharmonic Oscillator-Diatomic Molecule (Morse Curve)-IR Spectra-Spectral Transitions & Selection Rules-Example of HCL-Vibration-Rotation Spectra of Diatomic Molecule-Born Oppenheimer Approximation-Instrumentation for Infra Red Spectroscopy

(Section 7 to 7.5, 7.15, 7.16 of Molecular Structures & Spectroscopy by G Aruldas& Chapter 3 of Fundamentals of Molecular Spectroscopy by Banwell& Elaine M Mccash)

### 7. Raman Spectroscopy 10 hours Max marks 15

Raman Effect, Elements of Quantum theory & Applications-Pure Rotational Raman Spectrum-Examples of Oxygen and carbon-dioxide-Rotational Raman spectrum of symmetric Top molecule-Example of chloroform.Vibrational Raman spectrum of Symmetric Top Molecule-Example of Chloroform. (Molecular Structures & Spectroscopy by G Aruldas& Chapter 4 of Fundamentals of Molecular Spectroscopy by Banwell& Elaine M Mccash)

### 8. Laser Physics 12 hours Max marks 22

Induced Absorption-Spontaneous Emission & Stimulated Emission-Einstein Coefficients Principle of Laser-Population inversion-Pumping-Properties of Laser-Types of Laser-Principle & working of Ruby laser, Helium Neon Laser & Semiconductor Laser- -Yag Lasers (Qualitative ideas only). Application of Lasers

(Chapter 12 Masers & Lasers, Solid State Physics by S.O. Pillai, Lasers –Theory & Applications by K Thyagarajan&AjoyGhatak)

### **Text Books for Study :**

1. Solid State Physics by S O Pillai
2. Fundamentals of Molecular Spectroscopy by Banwell & Elaine M Mccash
3. Molecular Structure & Spectroscopy by G Aruldhas

### **References**

1. Solid State Physics by M A Wahab
2. Introduction to Molecular Spectroscopy by G M Barrow
3. Raman Spectroscopy by Long D A
4. Modern Physics by R Murugesan
5. Optical Communications – M MukundaRao – Universities Press
6. Principles of Condensed Matter Physics – P M Chaikin & T C Lubensky – Cambridge University Press

### **Semester-6**

#### **Core Course – XII 72 hrs (Credit – 4)**

#### **PH6 B12 : NUCLEAR PHYSICS, PARTICLE PHYSICS & ASTROPHYSICS**

#### **UNIT: 1 (35 hrs)**

- 1. Nuclear Structure** **12 hours** **Max marks 20**  
Nuclear composition – nuclear electrons – discovery of neutron, Nuclear properties – nuclear radii – spin and magnetic moment – nuclear magnetic resonance, Stable nuclei, Binding energy, Liquid drop model -semi empirical binding energy formula- mass parabolas, Shell model, Meson theory of nuclear forces – discovery of pion.  
(Text Books: 11.1 to 11.7 Concepts of Modern Physics – Arthur Beiser (5<sup>th</sup> Edition), Nuclear Physics – Irving Kaplan (17.8))
- 2. Nuclear Transformations :** **16 hours** **Max marks 27**  
Elementary ideas of radio activity- Alpha decay-tunnel theory of alpha decay-derivation for the formula for decay constant-Beta decay-negatron emission-positron emission-electron capture-inverse beta decay and the discovery of neutrino, Gamma decay-fundamental ideas of nuclear isomerism and internal conversion, The concept of interaction cross section--reaction rate-nuclear reactions-center of mass frame of reference and Q value of a nuclear reaction, Nuclear fission, Nuclear reactors-breeder reactors, Nuclear fusion-nuclear fusion in stars-proton-proton cycle-carbon nitrogen cycle-formation of heavier elements, Fusion reactors-confinement methods.  
(Text Book: 12.1 to 12.12 & Appendix of Chapter 12, Concepts of Modern Physics – Arthur Beiser (5<sup>th</sup> Edition))
- 3. Nuclear Detectors And Counters:** **7 Hours** **Max marks 15**  
Interactions of radiation with matter – fundamental ideas, Gas filled counters- ionization

chamber – proportional counter – G.M. counter, Cloud chamber, Bubble chamber, Semi conductor detectors and scintillation counters (Qualitative study only. Maximum Weightage: 2) (Text Book: 17 to 17.6 Atomic and Nuclear Physics-An Introduction: T.A. Littlefield and N. Thorley)

## **UNIT: 2 (37 hrs)**

### **4. Cosmic Rays: 4 hours Max Marks 10**

Nature of Cosmic rays, the origin of cosmic rays, geomagnetic effects, Cosmic ray showers (Text Book: 25.1 to 25.6 Atomic and Nuclear Physics-An Introduction: T.A. Littlefield and N. Thorley)

### **5. Particle Physics: 15 hours Max marks 24**

Leptons –electron and positron-neutrinos and anti-neutrinos-other leptons, Hadrons-resonance particles, Elementary particle quantum numbers-baryon number- lepton number-strangeness-isospin-electric charge-hyper charge-basic ideas on symmetries and conservation laws, Quarks -color and flavor, Fundamental interactions (Text Books: 13.2 to 13.6 Concepts of Modern Physics-Arthur Beiser (5<sup>th</sup> Edition)

### **6. Particle Accelerators 8 hours Max marks 15**

Classification of accelerators-electrostatic accelerators-cyclic accelerators, the linear accelerator, the cyclotron, the betatron, the electron synchrotron .  
(Text Books: 18.4 to 18.8 Atomic and Nuclear Physics- An Introduction: T.A. Littlefield and N. Thorley, 21.3 to 21.5 Nuclear Physics-Irving Kaplan)

### **7. Astrophysics and astronomy 10 hours Max marks 15**

Stellar magnitudes an sequences, Absolute magnitude, The bolometric magnitude - Different magnitude standards, The colour index of a star, Luminosities of stars, Stellar parallax and the units of stellar distances, Stellar positions: The celestial co-ordinates. A Qualitative study on stellar positions and constellations  
(Text Book: 3.1 to 3.9 An introduction to Astro Physics-BaidyanathBasu)

## **References**

1. Nuclear Physics: D.G. Tayal
2. Atomic Physics: J.B. Rajam
3. Atomic Physics: John Yarwood
4. Introduction to Astrophysics: H L Duorah&KalpanaDuorah
5. Mayer – Jensen Shell Model and Magic Numbers: R Velusamy, Dec 2007
6. The Enigma of Cosmic Rays: BimanNath, Resonance – Feb 2004, March 2004

7. Black body radiation: G.S. Ranganath, Resonance – Feb. 2008.
8. Advanced Physics Second Edition – Keith Gibbs – Cambridge University Press

**Semester-6**  
**Core Course – XII (ELECTIVE) 54 hrs (Credit – 3)**  
**PH6 B13 (E3): MATERIALS SCIENCE**

**Unit I**

**Introduction-(15 hrs) Max Mark32**

What is material science, Classification of materials-metals, ceramics, polymers, composites, Advanced materials, smart materials.(Section 1.1 to 1.6 of Callister's Material science Text Book)

**Bonds in materials**

Atomic bonding in solids-bonding forces and energies, Primary bonding - Ionic bonding, Covalent bonding, metallic bonding, Secondary bonding – van der waals bonding, fluctuating induced dipole bonds, polar molecule induced dipole bonds, permanent dipole bonds example of anomalous volume expansion of water.(section 2.5 to 2.8 of Callister's Material science)

**Crystals**

Crystalline and Non Crystalline materials –Single crystals, polycrystals, Anisotropy, metallic crystal structures, atomic packing factors of FCC, BCC, Hexagonal close packed crystal structure, Density computations, Linear and planar densities, polymorphism and allotropy, non crystalline solids.(Section 3.8 to 3.11, 4.2 to 4.9)

**Unit II**

**Imperfections in Solids–(12 hrs) Max mark 32**

Point defects, Vacancies and self interstitials, substitutional impurities, atomic point defects-Schottky defect, Frenkel defect, Dislocations-edge and screw dislocations, burgers vector, Interfacial defects-External surfaces, Grain boundaries, twin boundaries, stacking faults, Bulk and volume defects.(Section 5.2 to 5.8)

**Diffusion in solids -**

Introduction, Diffusion mechanism, Vacancy diffusion, Interstitial diffusion, Steady state diffusion and Non-steady state diffusion, fick's laws, Factors that influence diffusion-temperature, diffusion species, example of aluminium for IC interconnects. diffusion in ionic and polymeric materials (section 6.1 to 6.8)

**Unit III**

**Ceramics and its properties(15 hrs) Max mark 32**

Glasses, Glass ceramics, properties, refractories - fire clay and silica refractories, Abrasives, cements, advanced ceramics-optical fibers, ceramic ball bearings, piezo electric ceramics, stress-strain behaviour of ceramics, flexural strength and elastic behaviour.(Section 12.1 to 12.8, 12.11 )

**Polymers and its properties**

Different forms of Carbon-Diamond, Graphite, Fullerenes, Carbonnano tubes. (Qualitative aspects only)(Section 4.17, )

Hydro carbon molecules, polymer molecules, homo polymers and copolymers, molecular weight calculation, linear polymers, branched polymers, cross linked polymers, network polymers, thermo setting and thermo plastic polymers, stress-strain behaviour and viscoelastic deformation of polymers.(Section 13.1 to 13.9, 14.2, 14.3, 14.4)

**Unit IV**

**Material Analysis Techniques (12 hrs) Max mark 30**

Single crystal and powder diffraction techniques with diffractometer, Laue's technique and rotating crystal method, Microscopic techniques-Optical microscopy, electron microscopy, transmission electron microscopy, scanning electron microscopy, Scanning probe microscopy, construction and working of each device, Grain size determination technique. (Section 4.20, 5.12, 5.13 )

Book for study –

Material Science and Engineering by William D. Callister, Adapted by R. Balasubramanyam (IIT Kanpur), Published by Wiley India Pvt Ltd (Price - 550.00)(Reprint 2011)

Book for reference

1. Materials science and engineering- V Edn- V Raghavan( PHI)
2. Material science by S.L.Kakani&AmitKakani, 2nd edition 2010, reprint 2011
3. Material Science & Engineering, R.K. Rajput (Jain Book Agency)
4. Material Science and Engineering, I. P . Singh, &SubhashChander (Jain Book Agency)

## **B.Sc PROGRAMME IN PHYSICS (CORE)**

### **PRACTICALS**

All centres must arrange sufficient number of apparatus before the Practical Examination. All apparatus must be in proper condition before the Practical examination.

The external practical examination will be conducted at the end of 4<sup>th</sup> & 6<sup>th</sup> semesters. At the time of external examination, a student has to produce **certified fair record** with a minimum of **75%** of the experiments, listed in the syllabus. Valuation of the record must be done internally and externally. **A maximum of one mark can be awarded to an expt which is neatly recorded.** Total mark for record in external valuation is 20. The principle or the logic and the relevant expressions of the experiment must be shown at the time of examination

Two test papers for practical internals could be conducted by including test papers in any two convenient cycles in the place of an experiment. A batch of students can be evaluated in each class. If there are a total of 4 cycles for a practical course, a test paper each can be included in the 3<sup>rd</sup> and 4<sup>th</sup> cycles. If there are a total of 3 cycles for a practical course, a test paper each can be included in the 2<sup>nd</sup> and 3<sup>rd</sup> cycles. A model examination can also be conducted after completion of all cycles. Internal grade for test papers can be awarded based on the best two performances.

### **NUMBER OF QUESTIONS IN THE QUESTION PAPER SHALL**

**BE PAPER -I EIGHT (8) PAPER- II & III SIX (6)**

**OUT OF THESE A MINIMUM OF 75% OF THE QUESTIONS ARE TO BE SET FOR THE EXAMINATION AT A CENTRE**

**PH4B05 Practical-I (Credit 5)**  
**1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup> & 4<sup>th</sup> SEMESTER EXPTS**  
**(Any Ten from Each Part)**

**Part A**

1. Young's modulus-non uniform bending-using pin and microscope-(load-extension graph).
2. Young's modulus-Uniform bending-using optic lever
3. Young's modulus-Angle between the tangents
4. Surface Tension-capillary rise method-radius by vernier microscope
5. Viscosity-Poiseuille's method -(Variable Pressure head, radius by mercury pellet method, sensibility method to find mass)
6. Moment of inertia-Flywheel
7. Moment of Inertia-Torsion Pendulum
8. Rigidity modulus-static torsion
9. Compound pendulum-acceleration due to gravity, Radius of gyration
10. Liquid lens-Refractive index of liquid and glass
11. Spectrometer-solid prism-Refractive index of glass measuring angle of minimum deviation.
12. Spectrometer-solid prism- Dispersive power

**Part B**

13. Deflection magnetometer-Tan A, Tan B positions
14. Deflection magnetometer -Tan C Position-moment of moments
15. Searle's vibration magnetometer-moment & ratio of moments
16. Box type vibration magnetometer-m &  $B_h$
17. Melde's string arrangement-Frequency, relative density of liquid and solid (both modes)
18. Ballistic galvanometer-figure of merit
19. Potentiometer-measurement of resistance
20. Potentiometer-calibration of ammeter
21. Ballistic Galvanometer- BG constant using HMS-then find  $B_h$ .
22. B.G.-Comparison of capacities Desauty's method.
23. Spectrometer- i-d curve
24. Verification of Thevenin's theorem.

### **PH6B14 - Practical II (Credit – 5)**

#### **5<sup>th</sup> & 6<sup>th</sup> SEMESTER EXPTS. (Any 20)**

1. Spectrometer-  $i_1$ - $i_2$  curve
2. Spectrometer-Cauchy's constants
3. Spectrometer-Diffraction Grating-Normal incidence
4. Laser-wavelength using transmission grating
5. Diffraction Grating-minimum deviation
6. Spectrometer-Quartz prism-Refractive indices of quartz for the ordinary and extra-ordinary rays
7. Newton's rings-wavelength of sodium light
8. Air wedge-angle of the wedge, radius of a thin wire
9. Lee's Disc –thermal conductivity
10. Potentiometer-calibration low range and high range voltmeters
11. Potentiometer- Reduction factor of TG
12. Variation of field with distance-Circular coil-moment of magnet &  $B_H$
13. Carey Foster's bridge-resistance & resistivity
14. Carey Foster's bridge-Temperature coefficient of Resistance
15. Conversion of Galvanometer to voltmeter and calibrating using Potentiometer.
16. Conversion of Galvanometer to ammeter and calibrating using Potentiometer.
17. BG Absolute Capacity
18. BG-High resistance by leakage method
19. BG Mutual inductance
20. Planck's constant using LED's (3no.s)
21. Polarimeter-Specific rotation of sugar solution.
22. Searls and Box vibration magnetometers-  $m$  &  $B_H$ .
23. Numerical aperture of an optical fibre by semiconductor laser
24. Frequency of AC using sonometer

### **PH6B15 Practical III (Credit – 5)**

#### **5<sup>th</sup> & 6<sup>th</sup> SEM EXPTS (Minimum Fifteen from Unit: I and Five from Unit : II)**

##### **Unit : I**

1. Construction of full wave, Centre tapped and Bridge rectifiers
2. Characteristics of Zener diode and construction of Voltage regulator.
3. Transistor characteristics and transfer characteristics in Common Base Configuration- current gain
4. Transistor characteristics and transfer characteristics in Common Emitter Configuration- current gain

5. CE Transistor Amplifier-Frequency response.
6. Full adder using NAND gates-construction & verification
7. Negative feed back amplifier
8. LC Oscillator (Hartley or Colpitt's)
9. Phase shift oscillator
10. Operational Amplifier –inverting, non inverting, Voltage follower
11. LCR circuits-Resonance using CRO
12. Construction of basic gates using diodes(AND, OR) & transistors (NOT), verification by measuring voltages
13. Voltage multiplier (doubler, tripler)
14. Multivibrator using transistors.
15. Flip-Flop circuits –RS and JK using IC's
16. Verification of De-Morgan's Theorem using basic gates.
17. Half adder using NAND gates

**Unit : II Numerical Methods Using Python :All programmes to be done.**

18. Solution of equations by bisection and Newton-Raphson methods
19. Least square fitting – straight line fitting.
20. Numerical differentiation using difference table.
21. Numerical Integration – Trapezoidal and Simpson's 1/3 rd rule.
22. Taylor series -  $\sin \theta$ ,  $\cos \theta$
23. Solution of differential equation Runge-Kutta method (Harmonic Oscillator).
24. Simulation of freely falling body. Tabulation of position, velocity and acceleration as a function of time.
25. Simulation of projectile – Tabulation of position, velocity and acceleration as a function of time – Plot trajectory in graph paper from tabulated values.

**( For B.Sc Programme In Mathematics, Chemistry Etc.)**

**Aims & Objectives.**

The syllabus is drafted to generate new concepts with practical thinking and multi dimensional applicability of physics in other science programmes so as to empower students who have undergone grading system of education at under graduate level.

It is restructured in order to correlate the concepts of Physics with other core programmes and also to generate exhaustive interest in physics course through series of activities like problem solving, active participation in laboratory programme, smart class room lectures etc..semesters,.

At the time of external examination, a student has to produce **certified record** with a minimum of **75%** of the experiments, listed in the syllabus.

**COMPLIMENTARY COURSE**

**SEMESTER -1**

**Complementary course-1**

**PH1 C01: Properties of matter & Thermodynamics**

**1. Elasticity 9 Hours**

Elastic moduli. (Elementary ideas )- Dependence of Young's modulus on temperature ( posing one practical application )- Work done per unit volume- poisson's ratio ( Engineering application and theoretical limits )- relation between various elastic constants- Twisting couple on a cylinder- Torsion pendulum-Determination of rigidity modulus of a wire-Bending of beams-bending moment- I-form girders- Cantilever loaded at the free end – Loaded uniformly (Derivation required )- Non uniform bending

**2. Surface Tension & viscosity 9 Hours**

Surface tension ( Elementary ideas )-Excess pressure inside a liquid drop and bubble (Effect of electrostatic pressure on a bubble-change in radius )-Work done in blowing the bubble ( problem based on the formation of bigger drop by a number of smaller drops )- Variation of surface tension with temperature, impurities, contamination- Effect of evaporation and condensation. Viscosity-Coefficient of viscosity-Derivation of poiseuille's equation, stokes equation-Determination of viscosity by poiseuille's method and stokes method-Brownian motion –Viscosity of gases

**3. Thermo dynamics 18 Hours**

Thermodynamic processes –Indicator diagram ( P-V diagram, P-T diagram, T-V diagram, T-S diagram )- Work done in Quasi static process-Work done in Isothermal, Adiabatic, Isochoric, Isobaric processes-First law of thermodynamics-Application to heat capacities-Second law of thermodynamics- Carnot's engine - Derivation of efficiency using Carnot's cycle-Carnot's theorem and its proof - Clausius-clapyron equation-Effect of pressure on melting point and boiling point.- Carnot's refrigerator( coefficient of performance )-

Entropy-Change of entropy in a Carnot's cycle, reversible cycle, irreversible cycle - principle of increase of entropy- Entropy and available energy- entropy and disorder

**Books for reference**

1. Properties of matter- D S Mathur
2. Heat and Thermo dynamics- D S Mathur (V Edn)
3. Properties of matter-JC Upadhaya
4. Heat and Thermodynamics - Zemansky
5. Physics- Resnick and Halliday
6. Thermodynamics- Brijlal and Suramanium

**SEMESTER - 2**

**Complementary course-III**

**PH2 C03: Mechanics, Relativity, Waves & Oscillations**

**1. Frames of reference .4 Hours**

Inertial frame of reference-Galilean transformation equations and Invariance- Non inertial frames- Centrifugal force and Coriolis force

**2. Conservation of Energy and Momentum 10 Hours**

Conservation of energy of a particle –Energy function- Potential energy curve- Conservative and Non conservative forces- Conservation of Linear momentum-Center of mass frame of reference- Rockets- motion under central force- Conservation of angular momentum ( pose suitable example )

**3. Relativity 8 Hours**

Postulates of special theory-Michelson Morley experiment-Lorentz transformation equations- Length contraction-Time dilation- Twin paradox- variation of mass with velocity-Mass energy relation- momentum energy relation

**4. Nano Science and Technology 8 Hours**

Length scales in Physics- nanometre- Nanostructures: Zero, One Two and Three dimensional nanostructures - Size effects in small systems- trapped particle in 3D (nanodot), electron trapped in 2D plane (nanosheet), electrons moving in 1D (nanowire, nanorod, nanobelt) ( elementary ideas only)  
Applications of nanomaterials in energy, medicine, food and environment - Buckminster fullerene and nano tubes

**5. Quantum mechanics 6 Hours**

Postulates of quantum mechanics-Wave function-Schrodinger equation ( Time dependent & steady state form )-eigen values and eigen functions-electron microscope and scanning tunnelling microscope ( Qualitative study )

**Books for reference-**

1. Mechanics – J C Upadhyaya
2. Special theory of relativity- Resnick
3. Modern physics –Arthur Beiser
4. Waves, Mechanics & Oscillations- S B Puri
5. Introduction to Nanoscience& Nanotechnology by K. K. Chattopadhyay and A. N. Banerjee, Publisher: PHI Learning and Private Limited
6. Nanotechnology, RakeshRathi, S Chand & Company, New Delhi

**SEMESTER - 3**

### Complementary course-III

#### PH3 C03: Optics , Laser , Electronics & communication

( Hrs/ Week-3 , Hrs / Sem -54, Credit -2 )

**1.Fermat's Principle-                      2Hrs                      Max marks 8**

Laws of reflection and refraction- verification by Fermat's principle

**2.Interference                              12 Hrs                      Max Marks 20**

Superposition of two sinusoidal waves ( resultant amplitude and intensity ),, constructive and destructive interference- Fresnel's two mirror arrangement and bi-prism- Interference with white light- Interference by a plane film- colours of thin films- Newton's rings (Reflected system )-Determination of wavelength

**3.Diffraction    8Hrs Max marks 16**

Fresnel's and Fraunhofer class of diffraction

Fraunhofer single slit diffraction pattern- Intensity distribution- plane diffraction Grating-resolving power and dispersive power. Experiment with grating

**4. Polarisation    8 Hrs Max marks 16**

Elementary idea- Brewster' law- Double refraction- positive and negative crystals- Quarter and half wave plate- production of plane , elliptically and circularly polarized light- optical activity

**5. Electronics    14 Hrs Max marks 24**

Half wave, Full wave and bridge rectifier circuits- Efficiency & ripple factor- Filter circuits ( capacitor filter and  $\pi$  filters ) – Zener diode characteristics- Voltage stabilization Transistors- CB, CE, CC Configurations- characteristics- Current amplification factors- relation connecting  $\alpha$  ,  $\beta$  and  $\gamma$  – CE Amplifier- frequency response- band width Basic principle of feedback- L C & RC oscillators- Colpitt's& Hartley oscillators . Logic gates- Universal gates- De- Morgan's theorem – Exclusive OR and Exclusive NOR gate

**6. Laser physics    6 Hrs Max marks 8**

Induced absorption- spontaneous emission and stimulated emission- population inversion-Principle of Laser-Types of laser- Ruby laser, Helium Neon laser- semi conductor laser (qualitative study )

## **7. Principle of Communication**

**6Hrs Max marks 8**

Transmission and reception of signals- modulation and demodulation- Types of modulation-AM, FM,PM.(Elementary only)

Text for study: Optics-Brijlal&Subramanian Principles of  
Electronics-VK Mehta

### **Books for reference**

1. Optics- Ajay Ghatak
2. Optics – Brijlal&Subrahmanian
3. Laser fundamentals – Silfast
4. Lasers – theory & applications- Thyagarajan&Ghatak
5. Principles of Electronics – VK. Mehta

## **SEMESTER - 4**

### **Complementary course-IV**

#### **PH4 C04: Electricity, Magnetism and Nuclear physics**

( Hrs/ Week -3 , Hrs / Sem -54, Credit -2 )

#### **1. Electrostatics**

**12 Hrs Max marks 22**

Coulomb's law between charges- Electric field- field lines- Electric potential-Gauss law- application to find field due to plane sheets of charge- Electrostatic shielding ( pose practical application ) –Dielectrics- capacitors

#### **2. Current electricity**

**8 Hrs Max marks 16**

Drift velocity of charges- electric resistance- super conductivity (basic ideas)- Potentiometer – determination of resistance- carey fosters bridge- temperature coefficient of resistance.

#### **3. Magnetism**

**10 Hrs Max marks 20**

Earths magnetism- magnetic elements- Dia magnets-paramagnets and Ferro magnets- magnetic moment-Deflection magnetometer-Tan A & Tan B - Searle's vibration magnetometer- Tangent galvanometer- Hysteresis

#### **4. Nuclear physics**

**14 Hrs Max marks 24**

Nucleus and its properties- nuclear force- stability of nucleus- binding energy- nuclear fission- fusion- reactors- Nuclear bomb, Hydrogen bomb- Radio activity-  $\alpha$ ,  $\beta$  and  $\gamma$  radiations- half life and mean life-  $C^{14}$  dating- Effects of radiation- Nuclear waste disposal Particle accelerators- Linear accelerator- cyclotron- Radiation detectors- gas detectors- semi conductor detectors

#### **5. Cosmic rays and Elementary particles 10 Hrs Max marks 18**

Cosmic rays (primary and secondary)- cosmic ray showers-latitude effect- longitude effect- Elementary particles- Classification- Leptons- Hadrons- resonance particles- quarks- color and flavour- Higgs boson- L H C- Dark energy- Origin of universe.

Text for study:

Electricity and Magnetism-Murukesan

Nuclear Physics-D.C.Tayal

### **Books for reference**

1. Introduction to Electro dynamics-David J Griffith
2. Electricity and Magnetism – Arthur F kip
3. Concepts of Modern physics – Arthur Beiser
4. Nuclear physics – Irvin Kaplan
5. Nuclear physics -D.C.Tayal

### **LAB PROGRAMME FOR COMPLIMENTARY COURSES**

**Lab examination will be conducted at the end of 4 th semester.**

The minimum number of experiments for appearing examination is **75% of total 24 expts** in the syllabus Basic theory of the experiment must be shown at the time of Examination.

**Students must submit a certified fair record at the time of Examination.**

Number of Questions per session for the practical Examination :8

A minimum of 6 questions in the Question paper shall be set for the Examination at the centre.

### **COMPLIMENTARY PRACTICALS**

#### **Complimentary Course ( Practical )**

**Hours per week-2, Hours per semester-36,Credit-0**

**(Any FIVE )**

1. Characteristics of Diode and Zener diode
2. Liquid lens- Refractive index of liquid and glass
3. Torsion pendulum- Rigidity modulus
4. Spectrometer- Refractive index of the material of prism
- 5 Deflection Magnetometer- Moment of a magnet ( Tan-A position )
- 6 Potentiometer-Measurement of resistance

#### **Complimentary Course ( Practical )**

**Hours per week-2, Hours per semester-36,Credit-0**

**(Any five )**

- 1 Young's modulus – Uniform bending –using optic lever
- 2 Static torsion – Rigidity modulus

3. Spectrometer- Grating- Normal incidence
4. Melde's string- Frequency of fork ( Transverse and Longitudinal mode )
5. Half wave rectifier and Full wave rectifier
6. Field along the axis of a circular coil

**Complimentary Course ( Practical )**

**Hours per week-2, Hours per semester-36,Credit-2**

**(Any five )**

1. Young's modulus- Pin and microscope (Non- Uniform bending )..
2. Potentiometer- Conversion of Galvanometer in to voltmeter ( To read 0.1 volt/ div using a potentiometer)
3. Viscosity of liquid- Capillary flow- Variable pressure head method
4. Logic gates – Verification of truth table
5. Carey Fosters bridge- Resistivity of the material of wire
6. Surface Tension-Capillary rise method-Radius by microscope.

**Complimentary Course ( Practical )**

**Hours per week-2, Hours per semester-36,Credit-2**

**(Any five )**

1. Young's modulus of a cantilever- Pin and microscope method
2. Potentiometer-Calibration of low range voltmeter
3. Moment of inertia of fly wheel
- 4.. Tangent galvanometer – Reduction factor
5. Searl's vibration magneto meter – Comparison of moments
- 6.. Newton's rings- Wavelength of sodium light

# MODEL QUESTION PAPERS

Reg. No.....

(A) CORE COURSE (1)

Name.....

FOURTH SEMESTER B.Sc.DEGREE EXAMINATION MAY 2016  
(CCSS)

PHYSICS CORE  
PH4B07- ELECTRODYNAMICS - I

Time: 3 hours

Total Marks : 80

*Symbols used in this question paper have their usual meanings*

## SECTION A

( Answer in a word or phrase)

**Answer all questions; each question carries 1 mark**

1. Write down the expression of volume current density  $J$ ?
2. What will happen to the domains in a ferromagnetic substance in a external magnetic field?
3. What is the relationship between electric potential and electric field?
4. A charge  $q$  is placed at the centre of a cube of side  $L$ . What is the electric flux linked with the cubical surface?
5. Write down the divergence and curl of Magnetic fields?

**Questions 6 to 10 : Write True or False.**

6. The Electric field developed between two oppositely charged parallel plates is uniform.
7. In magneto statics boundary conditions, normal components of fields are discontinuous.
8. The concept of magnetic vector potential  $A$  is introduced on the basis of Lenz's law.
9. No work is done in moving a charge from one point to another on equi potential surface.
10. When an dielectric is placed in a parallel plate capacitor its capacitance decreases.

10x1= 10

## SECTION B

**(Answer in Two or three sentences)**

**Answer all questions. Each question carries 2 marks.**

11. State and explain Coulomb's law
12. Define electric field at a point. Give its two units..
13. What are Polar molecules ?
14. State the first Uniqueness theorem?
15. Show that surface current density is the product of charge density and velocity of charges?
16. Write down the differential form of Ampere's circuital theorem from the integral form.
17. How magnetic dipoles are generated in specimen placed in a magnetic field?

7x2= 14

**SECTION C**

**(Answer in a paragraph of about half a page to one page)**

**Answer any three questions. Each question carries 4 marks**

18. What are paramagnetic and diamagnetic substances?
19. Derive an expression for the electric field intensity at a point in between two infinite plane sheet of charge?
20. What are bound currents? Explain them?
21. Explain cyclotron motion?
22. Derive Amper's law in magnetized materials
23. Discuss about the comparison of magnetostatics and electrostatics.
24. Derive Poissons equation and obtain Laplace equation.

5x4= 20

**SECTION D**

**(Problems- write all relevant formulas. All important steps carry separate marks)**

**Answer any four questions. Each question carries 4 marks**

25. Find the electric field at a distance z above the centre of a flat circular disc of radius R, which carries uniform surface charge  $\sigma$ .
26.  $E = xy \mathbf{i} + 2yz \mathbf{j} + 3xz \mathbf{k}$ . Check whether it is an admissible electric field or not.
27. An electron travels with a velocity of  $2 \times 10^8$  m/s perpendicular to a uniform magnetic field 0.15 T. Determine the force on the electron.
28. A potential difference 100 V is applied to a 1 microfarad and 2 microfarad capacitors are connected parallel. Find charge and potential across each other.
29. A point charge  $10^{-7}$  is situated at the centre of a cube of side 1m. Calculate the electric flux through the surface.
30. A power line carries a current of 90 Ampere in East – West direction. What is the magnitude and direction of the magnetic field due to the current 1.5 m below the line?
31. Find out the magnetic flux density B of a square wire loop of side 10 cm carrying a current 1 A in the clockwise direction

4x4= 16

**SECTION E**

**(Essays - Answer in about two pages)**

**Answer any two questions. Each question carries 10 marks.**

32. Derive equations for div and curl of B due to a volume distribution of current..
33. Applying Gauss's law find the electric field due to a uniformly charged spherical Insulator at a point (a) outside (b) on the surface and (c) inside. Plot the variation graphically.
34. What is the effect of magnetic field on atoms?

35 Derive an expression for the magnetic field due to a straight conductor carrying steady current using Biot – Savart law?

2x10 = 20

### CORE COURSE (2)

PH5 B08 - PHYSICAL OPTICS AND MODERN OPTICS

FIFTH SEMESTER B.Sc. DEGREE EXAMINATION (CCSS)

**PH5 B08 - PHYSICAL OPTICS AND MODERN OPTICS**

Time: 3 hours

Total Marks: 80

*Symbols used in this question paper have their usual meanings*

#### SECTION A

(Answer all questions in a word or phrase) Each question carries 1 mark

1. When white light is used in biprism experiment, centre of fringe system is.....
2. What is the ratio of the amplitudes if the ratio of the intensities is 4:1?
3. What will happen to the fringe width if the biprism experiment is conducted in water instead of air?
4. Colours of thin film is due to .....
5. The central point in Newton's ring seen in reflected light appears .....

#### Questions 6 to 10 : Write True or False.

6. The optical path length can never be less than geometrical path
  7. For negative crystal  $\mu_e$  is less than  $\mu_o$ .
  8. Refractive index of core is less than that of cladding.
  9. Total internal reflection occurs when light ray travels from rarer to denser medium.
  10. Optical fibres are immune to external interferences.
- (10x1= 10)

#### SECTION B

(Answer all questions in two or three sentences) Each question carries 2 marks.

11. What are the necessary conditions for producing sustained interference?
  12. Draw the diagram of Fresnel's two mirror arrangement
  13. What is Rayleigh's criterion for resolution?
  14. Compare zone plate with convex lens.
  15. Give two applications of Holography.
  16. What is the difference between step index fibre and graded index fibre.
  17. What is acceptance angle? Write down the expression for it.
- ( 7x2= 14)

#### SECTION C

(Answer any five questions in a paragraph of about half a page to one page) Each question carries 4 marks

18. Using Fermat's principle prove the second law of reflection.
19. Explain how the distance between the two virtual slits in the biprism experiment is determined?
20. Deduce an equation for the resolving power of a grating
21. Explain with necessary graph the intensity distribution due to diffraction at a straight edge.

22. Distinguish between holography and photography.
23. Briefly explain how hologram is constructed.
24. Explain three types of pulse dispersions in optical fibres.

( 5x4= 20 )

### SECTION D

(Problems- write all relevant formulas. All important steps carry separate marks)

Answer any four questions. Each question carries 4 marks

25. Fresnel's biprism of refractive index 1.5 has an angle of  $1^\circ$ . If the biprism is kept at a distance of 0.3 m from the slit illuminated by a light of wave length 600nm., Find the band width. Given the distance between biprism and screen is 0.7m.
26. A beam of monochromatic light of wavelength 582nm falls normally on a glass wedge with the wedge angle of 20 seconds of an arc. If the refractive index of glass is 1.5, find the number of dark fringes per cm of the wedge length.
27. In a Newton's rings experiment the diameter of the 15<sup>th</sup> ring was found to be 0.59cm and that of the 5<sup>th</sup> ring was 0.336 cm. If the radius of the Plano-convex lens is 100 cm, calculate the wave length of the light used.
28. A parallel beam of light of wave length 546 nm is incident at an angle of  $30^\circ$  on a plane transmission grating which has 6000 lines per cm. Find the highest order spectrum that can be observed.
29. What is the radius of the first half-period zone in a zone plate behaving like a convex lens of focal length 60 cm for light of wavelength 600 nm.
30. Calculate least thickness of a calcite plate which would convert plane polarized light into circularly polarized light. Given  $\mu_o=1.65$ ,  $\mu_e = 1.48$  and wavelength of light is 589 nm.
31. The numerical aperture of an optical fibre is 0.5 and the core refractive index is 1.54. Find The refractive index of the cladding.

(4x4= 16)

### SECTION E

(Essays - Answer any two questions in about two pages)

. Each question carries 10 marks.

32. Derive the system matrix for a thick lens and hence arrive at lens maker's formula.
33. Describe Michelson's interferometer .How will you determine the wave length of monochromatic light with the help of Michelson's interferometer?
34. Discuss Fraunhofer diffraction due to a double slit. Derive an expression for the intensity distribution and explain maxima and minima?
35. What is specific rotation? Deduce an equation for specific rotation. Describe Laurent's half shade polarimeter to find the specific rotation of sugar solution.

(2x10 = 20)

## B) OPEN COURSE

### VthSEM . NON CONVENTIONAL ENERGY SOURCES

Marks 40

Time 2 hours

#### Section A -One word answer- Answer all 6x1=6

- 1 .-----radiations are absorbed by Ozone
2. What type of energy is derived from heated ground water?
3. The temperature difference between upper and deeper layers of the ocean should be at least

- degree to install an OTEC plant
4. The primary source behind the wind energy is -----energy
  5. Molten Rock at a temperature 650 degree is called-----
  6. ....type of rotor mill is used for high velocity wind.

**Section B -Short answer - (In one or two sentences ) Answer all 5                   5x2=10**

7. Define Solar constant
8. What are the factors that determine the output from wind energy converter?
9. What are the two types of battery? Give examples
10. What are the different categories of geomass resources?
11. What are the sources of geothermal energy?

**Section C -Paragraph Answer -Answer any 4   4x4=16**

12. What do you mean by solar green house? Explain.
13. Describe with neat diagram the working of open cycle OTEC
14. List the advantages and disadvantages of geothermal energy.
15. Discuss the advantages and disadvantages of wind energy converters
16. Explain any one of the solar collectors with the help of a neat diagram.
17. Explain the working of a wind mill with the help of a diagram

**Section D - Essay -Answer any one                   1x8=8**

18. Describe the principle of working of solar furnace? What are the main applications? What are the advantages and limitations of solar furnace?
19. Explain how tidal power is used to generate electricity with one tidal energy conversion plant? Give its limits.
20. Discuss the methods to get energy from Bio mass.

**(C) COMPLIMENTARY COURSE**

PH3C07- Optics, Laser, Electronics and communication Time:

3 hours Maximum marks: 64

Section A (one word)

Answer all questions. Each question carries 1 mark

- 1 Colour of thin films is due to .....
- 2 When a ray of light is reflected at the boundary of a rarer to denser medium, the reflected ray undergoes a phase change of .....
- 3 What is the phenomenon of light that illustrates its transverse nature?
- 4 In double refraction the ray which obeys Snell's law is known as .....
- 5 Zener diode is always .....biased.
- 6 If the inputs of a NAND gate are connected together, the resulting circuit is a .....gate.
- 7 The energy level having greater lifetime is known as .....
- 8 In Ruby laser the active medium is.....
- 9 .....converts nonelectrical signal into electrical signal.
- 10 In amplitude modulation the band width is twice the .....

(10X1=10)

Section B (Short answer questions)

Answer all questions. Each question carries 2 marks

- 11 What is Fermat's principle?
- 12 Define optical path.

- 13 What is constructive interference?
- 14 What is meant by resolving power of a grating?
- 15 State and explain Brewster's law.
- 16 What is stimulated emission?
- 17 What are the necessities of modulation?

(7X2=14)

#### Section C (Paragraph questions)

Answer any 2 questions. Each question carries 4 marks

- 18 Obtain the laws of refraction from Fermat's principle.
- 19 Explain the production and detection of circularly polarized light.
- 20 With a neat diagram explain briefly the working of a Common Emitter Transistor amplifier.
- 21 Explain the principle and working of a He-Ne Laser.
- 22 What is modulation? What are different types of modulation?

(2X4=8)

#### Section D (Problems)

Answer any 3 questions. Each question carries 4 marks

- 23 A soap film of refractive index 1.33 and thickness  $1.5 \times 10^{-4}$  cm is illuminated by white light incident at an angle of  $60^\circ$ . The light reflected is examined through a spectroscope in which a dark band corresponding to a wavelength of  $5 \times 10^{-5}$  is found. Calculate order of the dark band.
- 24 A parallel beam of sodium light is incident normally on a plane transmission grating having  $6 \times 10^5$  lines per meter length. The first order spectrum is found to be deviated through an angle of  $20.7^\circ$  from the normal. Calculate the wavelength of light used.
- 25 Plane polarized light is incident on a Calcite plate cut with faces parallel to optic axis. If the emergent light is circularly polarized, calculate the least thickness of the plate.  $\mu_o = 1.658$ ,  $\mu_e = 1.486$  and wavelength of light used is  $5890 \text{ \AA}$ .
- 26 A tube 30cm long filled with a solution containing 15gm of cane sugar per 100cc is placed in the path of a polarized light. Find the angle of rotation of the plane of polarization. The Specific rotation of sugar is  $66.5^\circ$ .
- 27 Find the operating frequency of Colpitt's oscillator if  $C_1 = 0.01 \mu\text{F}$ ,  $C_2 = 0.1 \mu\text{F}$  and  $L = 10 \mu\text{H}$ .

(3X4=12)

#### Section E (Essays)

Answer any 2 questions. Each question carries 10 marks

- 28 Draw and explain the fringe formation by Fresnel's biprism. Explain how can it be used to determine the wave length of a monochromatic light.
- 29 Discuss the Fraunhofer diffraction due to a single slit. Also find the width of central maximum.
- 30 Describe the principle and working of half wave and full wave rectifier. Show that the rectification efficiency of full wave rectifier is twice that of half wave rectifier.

(2X10=20)

### (D) CORE COURSE -1

$$\begin{pmatrix} \cos\theta & -\sin\theta \\ \sin\theta & \cos\theta \end{pmatrix}$$

**MODEL QUESTION PAPER**

**PH1B01-METHODOLOGY OF SCIENCE AND PHYSICS**

**Max marks 100**

**Time 3 Hours**

**1x10=10**

**Section A(Answer all questions)**

1. Knowledge obtained by deductive reasoning is called -----
2. Author of Principia Mathematica is-----
3. Who introduced the word Physics to science first?
4. -----is referred to as language of science .
5. A vector divided by its magnitude is -----vector.
6. Vectors A and B are such that  $[A+B]=[A-B]$  then the angle between the vectors is-----
7. Two forces 6N and 2N are acting at an angle 60 degrees. Angle made by the resultant with the greater force is-----

**State whether the statement is true or false (8-10)**

8. Finding the speed of a car is science.
9. A Scientific Theory is extensible.
10. If  $\text{Curl } F = 0$ , then F is rotational.

**Section B Answer all (Write in two or three sentences.) Two marks each.**

**7x2=14**

11. What are auxiliary hypothesis and adhoc hypothesis?
12. What is meant by pseudo science?
13. What is a black body?
14. Give three properties of null vector.
15. What is the geometrical meaning of gradient?
16. Define transpose of a matrix
17. State and explain Stokes theorem

**Section C . Write in one paragraph (Write any five) 5x4=20**

- 18 What are the assumptions made by Newton to develop Mechanics?
19. What is DeBroglies hypothesis?
20. Discuss the importance of peer review.
21. Give the elemental displacement in cylindrical coordinates

22. What is Hermitianmatrix. Show that A is Hermitian,  $A = \begin{bmatrix} 1 & i & 0 \\ -i & 0 & -2i \\ 0 & 2i & 0 \end{bmatrix}$

23. Using spherical polar coordinates find the volume of a sphere of radius R.
24. Prove that the given vectors  $A=1+4j+3k$  and  $B=4i=2j-4k$  are perpendicular to each other.

**Section D.(Solve any four problems.) 4x4=16**

25. The threshold wavelength for photo electric emission in tungsten is 230nm.What is the wavelength of light that must be used in order to eject electron with energy of 1.5 eV.
26. Find the area of a parallelogram whose sides A and B are in metres.  $A=i+j+k$  and  $B+=3i+2k$
- 27 If  $F= 2xz^2 i-yzj+3xz^3 k$ , find the Curl of Curl of F at the point (1,1,1)
28. If  $A=4i-3j+2k$  and  $B=2i-4j+3k$  and  $C=4i-8j-2k$  find  $(A \times B) \cdot C$
29. A particle acted upon by a force  $F=6i+j-3k$  is displaced from a point  $i+2j+3k$  to a point  $5i+4j+k$ .Find the work done by the force.
30. Calculate the Laplacian of the following function  $\phi= x^2+2xy+3z+4$

31. Show that matrix A is orthogonal.  $A=$

**Section E (Write any two ) 2x10=20**

32. What is hypothesis? Discuss the various aspects and steps in formulation of hypothesis

scientific method.

33. Write an essay on the development of Quantum Mechanics

34. Solve the equations using Cramer's rule.

$$2x - y + 2z = 2, \quad x + 10y - 3z = 5, \quad -x + y + z = -3$$

35. What are Eigen values and Eigenvectors. Find the Eigen values and Eigen vectors of

$$A = \begin{pmatrix} 2 & 1 \\ 1 & 1 \end{pmatrix}$$

**FIFTH SEMESTER B.Sc .DEGREE EXAMINATION  
(CCSS)  
PH5 B09: ELECTRONICS (ANALOG & DIGITAL)**

Time: 3 hours

Total Marks : 80

*Symbols used in this question paper have their usual meanings*

**SECTION A**

**(Answer in a word or phrase)**

**Answer all questions; each question carries 1 mark**

1. What is the maximum efficiency of a full wave rectifier?
2. A zener diode is used as a -----
3. There is a phase difference of -----between the input and output voltages of a CE amplifier..
4. For highest power gain which transistor configuration is to be used?
5. The binary equivalent of a hexadecimal number EF is -----

**Questions 6 to 10 : Write True or False.**

6. If the doping level of a crystal diode is increased, the breakdown voltage decreases.
7. CC configuration is used for getting high voltage gain.
8. The input to an XOR gate are 1 , 0, 1. Then the output will be zero.
9. Two's complement of 10111 is 01000.
- 10 The decimal equivalent of octal number 110 is 73.

**10x1=10 Marks**

**SECTION B**

**(Answer in Two or three sentences)**

**Answer all questions. Each question carries 2 marks.**

11. What is positional number system?
12. What is the importance of modulation factor in communication system?
13. Define  $\alpha$  of a transistor and show that it is always less than unity.
14. Draw a full adder and its truth table.
15. Why do you prefer to express the gain in db?
16. State and explain De Morgans theorem.
17. Subtract 4 from 8 using two's complement method in 8-bit format.

7x2= 14Marks

### SECTION C

(Answer in a paragraph of about half a page to one page)

Answer any three questions. Each question carries 4 marks

18. With a neat labelled diagram describe the working of a full wave bridge rectifier
19. Explain the following terms for a transistor CE amplifier a) Voltage gain b) Power gain
20. Discuss the importance of load line analysis in a transistor amplifier.
21. Draw the connection diagram of two stage RC coupled transistor amplifier and discuss the use of various capacitors in the circuit.
22. What do you understand by frequency modulation? Explain its advantages over amplitude modulation.
23. Explain the working of a basic integrator circuits using opamp.
24. Explain how voltage stabilization is ensured in a zener voltage regulator.

5x4= 20 Marks

### SECTION D

(Problems- write all relevant formulas. All important steps carry separate marks)

Answer any four questions. Each question carries 4 marks

25. A full wave bridge rectifier is connected to a 12V step down transformer. If the forward resistance of each diode is  $4\Omega$  and load resistance is  $400\Omega$ , find the dc load current and efficiency of the rectifier.
26. A transistor amplifier is biased with feedback resistor  $R_B$  of  $100k\Omega$ . If  $V_{CC} = 20V$ ,  $R_C = 1k\Omega$ . And  $\beta = 100$  determine the operating points.
27. The absolute gain of an amplifier is 20. Find its decibel gain. When it is coupled to another amplifier the overall gain is 400. What is the overall gain in decibel.
28. Calculate the modulation index for an FM wave where the maximum frequency deviation is 50KHz and the modulating frequency is 5kHz.
29. A JFET has drain current of 5mA. If  $I_{DSS} = 10mA$  and  $V_{GS(off)} = -6V$ , find the value of  $V_{GS}$  and  $V_p$
30. A) Illustrate associative law of (i) addition and (ii) multiplication as applied to Boolean algebra.  
B) Also simplify the Boolean expression  $Y = (A+B+C) \cdot (A+B)$
31. Convert the following decimal numbers into binary numbers  
a) 133                      b) 59.6855

4x4= 16 Marks

### SECTION E

(Essays - Answer in about two pages)

Answer any two questions. Each question carries 10 marks.

32. Discuss two biasing circuits used in CE amplifier configuration. Also explain how stabilization of operating point is achieved in each case and discuss the advantages and disadvantages of each circuit.
33. Explain negative feed back. Derive an expression for gain in a negative voltage feedback amplifier. What are the advantages of negative feed back?
34. Explain the principle, working and V-I characteristic of UJT. Discuss one practical

application of UJT in detail.

35 With the help of diagrams explain the working of RS and JK flip-flops.

**2x10 = 20Marks**

**MODEL QUESTION PAPER (CORE)**

**Reg. No.....**

**Name.....**

**SIXTH SEMESTER B.Sc.DEGREE EXAMINATION (CCSS) PHYSICS CORE  
PH6 B11 : SOLID STATE PHYSICS, SPECTROSCOPY AND LASER PHYSICS**

Time: 3 hours

Total Marks : 80

*Symbols used in this question paper have their usual meanings*

**SECTION A**

**( Answer in a word or phrase)**

**Answer all questions; each question carries 1 mark**

1. The atomic packing factor for simple cubic structure is -----
2. Write down the range of frequency of microwave radiations .
3. A super conductor exhibit complete Meissner effect is called -----
4. Name the semiconducting material used in Semiconductor laser.
5. The commonly used source in microwave spectrometer is -----
6. Name two molecules which shows infrared spectrum.
7. The lines on the low frequency side of raman spectra are called -----
8. The symmetry element in which a rotation followed by a translation is called -----
9. For a non –rigid rotator the spacing between the successive spectral lines decreases. (True or False )
10. Name two linear molecules

**(10x1= 10 marks )**

**SECTION B**

**(Answer in a short paragraph- three or four sentences)Answer any all questions. Each question carries 2 marks.**

11. What is meant by coordination number. obtain the coordination number for fcc lattice
12. Explain how population of states affect the intensity of spectral lines
13. Distinguish between prolate and oblate type of molecules
14. What is zero point energy
15. Stokes or Antistokes, Which are more intense. Why
16. What is population inversion
17. Sketch the Schematic arrangement of an infrared spectrometer

**(7x2= 14 marks)**

**SECTION C**

**(Answer in a paragraph of about half a page to one page)**

Answer any five questions. Each question carries 4 marks

18. What are miller indices? Explain the significance of miller indices.
19. Sketch the possible orthorhombic crystal systems.
20. Explain the BCS theory.
21. Distinguish between Type I and Type II super conductors.
22. Discuss the factors on which width of spectral lines depends.
23. Explain the breakdown of Born Oppenheimer approximation
24. Discuss the rotational Raman spectrum of symmetric top molecules

(5x4= 20 marks)

#### SECTION D

(Problems- write all relevant formulas. All important steps carry separate marks)

Answer any four questions. Each question carries 6 marks

25. Show that for a simple cubic lattice  $d_{100} : d_{110} : d_{111} = 1; 1/\sqrt{2} : 1/\sqrt{3}$
26. The first line in the rotational spectrum of CO has a frequency of  $3.8424 \text{ cm}^{-1}$ . Calculate B and hence bond length in CO molecule. Given Avogadro No is  $6.022 \times 10^{23}$ .
27. What is the average period of rotation of HCl molecule if it is in the  $J=1$  state. The inter nuclear distance of HCl is  $0.1274 \text{ nm}$ . Given mass of Hydrogen and Chlorine atoms are  $1.673 \times 10^{-27} \text{ kg}$  and  $58.06 \times 10^{-27} \text{ kg}$  respectively.
28. The fundamental and first overtone of NO are centred at  $1876 \text{ cm}^{-1}$  and  $3724 \text{ cm}^{-1}$  respectively. Evaluate the equilibrium vibration frequency, the anharmonicity constant, zero point energy and force constant of the molecule.  
Mass of Nitrogen atom =  $23.25 \times 10^{-27} \text{ Kg}$ . Mass of Oxygen atom =  $26.56 \times 10^{-27} \text{ Kg}$ .
29. A substance shows a Raman line at  $4567 \text{ A}^{\circ}$  when exciting line  $4358 \text{ A}^{\circ}$  is used. Deduce the positions of stokes and anti stokes lines for same substance when exciting line  $4047 \text{ A}^{\circ}$  is used.
30. Critical temperature of mercury with isotopic mass 199.5 is 4.185 K. Calculate the critical temperature when atomic mass changes to 203.4.
31. Determine the coefficient of stimulated emission of radiation whose wavelength is 610 nm and the coefficient of spontaneous emission is  $10^6$  per second

(4x4= 16 marks)

#### SECTION E

(Essays - Answer in about two pages)

Answer any two questions. Each question carries 10 marks.

- 32 Explain Braggs Law and Braggs X-ray Spectrometer
33. Explain the rotational Spectrum of a linear diatomic molecule
34. Explain the theory and working of Ruby laser
35. Discuss the different Plains of symmetry of a cubic crystal

(2x10 = 20 marks)

MODEL QUESTION PAPER (CORE)

Reg. No.....

Name.....

SIXTH SEMESTER B.Sc. DEGREE EXAMINATION (CCSS) PHYSICS CORE

PH3PO3 - Mechanics

Time: 3 hrs

Max marks = 80

Section A Ans. All

1x10=10

1. The frame in which Newton's 1<sup>st</sup> and 2<sup>nd</sup> law hold good is called ----
2. Write the expression for coriolis force.
3. The hypothetical particle with velocity greater than light is called ----
4. For a central force ----- is conserved.
5. The Lorentz's equation for length contraction is -----.
6. The work done by a conservative force is -----.
7. A rocket works in .....principle.
8. Write the generalised coordinates for cycloid.
9. The minimum velocity need to escape for any body from the gravitational pull of a planet is -----.
10. The fictitious force acting in rotating body is -----.

Section B Ans. All

2x7=14

11. What is fictitious force?
12. What do you mean by time dilation?
13. What are the postulates of special theory of relativity?
14. What are constraints?
15. Differentiate between conservative and non-conservative forces.
16. State Kepler's laws of planetary motion.
17. What is centre of mass of a system?

Section C Ans. any 5

4x5=20

18. What is self energy? Deduce an expression for gravitational self energy of a

uniform sphere of radius 'r'.

19. What are cyclic coordinates? Show that if time is cycle in Lagrangian Hamiltonian  $H = \text{Total energy } E$  of the system.
20. Show that linear momentum of system of particles about centrem ass is zero.
21. Explain potential energy curve.
22. Write a note on coliolis force.
23. Write a note on four vectors and four momentum.
24. Show the C.M of 2 particle lie on line joining them.

Section D Ans. Any 4.

4x4=16

25. If  $F = (2xy+z^2) \hat{i} + x^2\hat{j} + 2xz \hat{k}$ , Show it is conservative. Calculate the amount of work done in by this force in moving a particle from (0,1,2) to (5,2,7).
26. A sand bag of mass 10 kg is suspended from 3m long weightless string. A bullet of 200g is fired with speed 20m/s into the bag and stay in it. Find the speed acquired by the bag and the maximum displacement of the bag.
27. Two bodies 1kg and 4 kg are kept 12cm apart. If a third mass 1 kg is placed in between them so that net force acting on the mass is zero. Calculate the position of the third mass, the potential energy of the system and energy to remove the third mass alone from the system.
28. If a body of mass 50 kg fall on earth, by how much the self energy of the mass changes? If its initial velocity is zero, what will be its velocity when it strikes on earth's surface?
29. If the rest mass of proton is  $1.67 \times 10^{-27}$  kg, calculate the velocity and momentum if it moves with  $2.7 \times 10^8$  m/s. If it collides with a stationary nucleus of mass  $2.5 \times 10^{-26}$  kg and coalesces, fine the velocity of the combined particle.
30. A rod of length 5m is placed in xy plane of system  $S^1$  at an angle of  $\sin^{-1}(3/5)$ . Calculate its length and orientation in the frame S if the frame  $S^1$  is moving with a speed  $0.8c \hat{i}$  relative to S.
31. A particle at rest breaks into two particles of rest mass ratio 1:2. If the heavier particle moves with a velocity  $1.8 \times 10^8$  m/s find the velocity of lighter particle. Also find the velocity of lighter particle relative to the heavier one.

Section E Ans. Any 2.

2x10=20

32. What is principle of virtual work? Derive Lagrangian from that.
33. Derive variation of mass with velocity.
34. Derive Keplers laws of planetary motion from Newtons law of gravitation.
35. Describe the principle of rocket. Derive the expression for acceleration and final velocity if rocket.
